CONFERENCE ROOMS

A modern conference room demands cable free, tidy, fully functional, automated and high tech. All Audio Visual equipments shall be hidden and integrated with the aesthetics of the room.

A wireless touch screen shall control the projection system, lighting, window blinds, audio, video, and virtually all kinds of electronic systems.

One touch of an icon makes a complete presentation. Not to search for remote controls, no confusion to operate and no technicians moving around. It makes presentations easy, efficient and impressive.

PLACES OF WORSHIP

Most of the worship centers have large domes, curved ceilings, large room volume and highly reflective surfaces in order to portray its traditional architecture. It is important that every worshiper hear clear words where ever they are seated. The sound system should be capable of reinforcing large choir groups some times accompanied with several band instruments which demands a high power with quality sound.

SMART CLASS ROOMS

Modern teaching methods are continuously influenced by the ever changing audio visual technologies to improve learning skills, management of study materials, students interaction and productivity.

AUDITORIUMS

A wide-angle photograph of a modern auditorium. The seating is arranged in a semi-circular pattern, with rows of blue seats. The walls are painted in vibrant colors, including blue, purple, and teal. The ceiling is dark with recessed lighting. The overall atmosphere is clean and contemporary.

Achieving optimum intelligibility (clarity), adequate sound pressure level and uniform coverage of sound are the challenging goals for a sound system designer

Designing audiovisual systems for an auditorium or a theater by qualified and experienced team of engineers make a big difference in achieving the expected and optimum performance.

Most of the modern auditoriums are used for multi purposes such as presentations, speeches, live programs and even concerts. The proposed audio visual system should satisfy the demands of all such events and convenience to use the system with simplicity.

A photograph of a live band performing on stage. The stage is lit with purple and white spotlights, creating a vibrant atmosphere. The band consists of several members, including a guitarist, a bassist, a singer, and a drummer. The audience is visible in the foreground, silhouetted against the stage lights.

LIVE ENTERTAINMENT

Night Clubs, Discotheques, Live Bands, Pubs, Dance Bars, DJ Systems, Karaoke Clubs, Amusement Centers etc. need high power and quality of Music. The equipment should withstand the abuse of different users from time to time. Carefully selected and installed equipment ensures optimum performance and durability.

New Age Technologies LLC provide turn key solutions for Club Sound, DJ Gears, Lighting, Video walls, Digital Signage and so on.

RESTAURANTS & BOUTIQUES

BUSINESS MUSIC is a new faculty in sound Engineer's academy. Many factors once ignored are given much attention today to carefully configure the appropriate system for the ever demanding and sensitive customers. Correct sound pressure level, even coverage, non beamed speakers, appropriate frequency response and equalization are few to mention. Today's Business Music is as important as the interior, lighting, climate and the themed music played.
